

Are you interested in learning about Cyberpsychology? Starting this week!

Cyberpsychology is an emerging field that blends developing technology and psychological concepts. Cyberpsychology is the study of how humans are impacted by technology, how individuals interact on the Internet, and the effect of cyberspace interactions on mental health. This class will focus on these issues as well as online identities, cyberbullying, online dating, and cybercrime.

Topics for this course include:

- The Cyber "Self"
- Online Relationships
- Social Media and Mental Health
- Cyber Security, Privacy, and Safety Online
- Deception, Scams, and Fraud
- Harassment, Bullying, and Hate
- Child Pornography and Related Crimes
- Terrorism & Extremism- Grooming and Radicalization

This class is taught by Jessica Mueller, Psy.D. Dr. Mueller is a clinical psychologist. She has presented at over 25 conferences and has lectured on cybercrime and the impact of social media on mental health. Her research focuses on terrorism, terrorism recruitment, emotional response to terrorism, ACEs, and social media influence on mental health and body image.

This class is part of the Professional Certificate in Forensic Psychology. More information can be found [here](#) on the SDSU Global Campus website
